

PHASE 1: BRAINSTORMING & IDEATION

1. Project Title

LegalEase: AI-Powered Legal Document Generator

2. Problem Statement

Creating legal documents such as employment contracts, lease agreements, Non-Disclosure Agreements (NDAs), and other agreements can be difficult for people without a legal background.

Users may find it challenging to structure the required information, include appropriate terms, and prepare a properly formatted legal document.

LegalEase aims to simplify this process by using Generative AI to create customizable and editable legal documents based on user-provided information.

3. Proposed Solution

LegalEase is an AI-powered web application that generates structured legal documents from user inputs.

The user provides details such as:

- Type of legal document
- Parties involved
- Terms and conditions
- Effective date

The system processes these inputs using a Generative AI model and produces a structured legal document that can be previewed, edited, and downloaded.

The project is designed to support documents such as employment contracts, lease agreements, NDAs, and other agreements.

4. Target Users

LegalEase can be useful for:

- Entrepreneurs and startup founders
- Freelancers
- Landlords and tenants
- Professionals
- Individuals who need basic legal documents

5. Main Idea

The main idea of LegalEase is to simplify the creation of legal documents by using Generative AI.

Users can enter important details such as the document type, parties involved, terms and conditions, and effective date. Based on these inputs, the system generates a structured legal document.

The generated document can then be previewed, edited, and downloaded according to the user's requirements.

6. Key Features

6.1 AI-Powered Document Generation

The system generates legal documents based on the information provided by the user.

6.2 Customizable Documents

Users can provide specific information and terms so that the generated document is tailored to their requirements.

6.3 Editable Preview

Users can preview the generated legal document and modify the content before saving or downloading it.

6.4 Multiple Download Formats

LegalEase supports downloading generated documents in different formats:

- TXT
- DOCX
- PDF

6.5 Professional Formatting

The generated documents can include proper headings, terms, logos, and footers to provide a structured document format.

6.6 User-Friendly Interface

The application provides a simple interface where users can enter the required information, generate a document, preview it, edit it, and download it.

7. Technology Idea

LegalEase is designed using the following technologies:

Technology	Purpose
Python	Application development
Streamlit	Frontend user interface
FastAPI	Backend API
Google Gemini AI-powered document generation	
python-docx	DOCX document generation
FPDF	PDF document generation

The frontend uses Streamlit for user interaction, while FastAPI handles backend API requests. Gemini is integrated for generating legal document content. The project also uses document-generation libraries to create downloadable files in TXT, DOCX, and PDF formats.

8. Expected Outcome

The expected outcome of LegalEase is an AI-powered application that allows users to generate structured legal documents by providing their required information.

The system should allow users to preview and edit the generated document and download it in TXT, DOCX, or PDF format.

The application is designed to make the process of preparing basic legal documents simpler and more accessible.

9. Conclusion

LegalEase aims to simplify legal document creation through Generative AI. By combining a user-friendly Streamlit interface, FastAPI backend, and Gemini-based document generation, the system provides a structured workflow for creating, editing, and downloading legal documents.

The project focuses on improving accessibility and making basic legal document preparation easier for users without extensive legal or technical knowledge.
