

PHASE 7 – PROJECT DOCUMENTATION

PROJECT TITLE

LegalEase: AI-Powered Legal Document Generator

1. PROJECT OVERVIEW

LegalEase is a web-based application developed to simplify the initial process of creating legal document drafts. The application allows users to select a document type, enter basic information, and generate a structured document.

2. PROBLEM STATEMENT

Creating legal documents manually can be time-consuming and difficult for users who are unfamiliar with legal document formats. LegalEase aims to provide a simple interface for generating basic legal document drafts.

3. PROJECT OBJECTIVES

- To provide a simple platform for generating legal document drafts.
- To provide multiple document types.
- To collect required user information.
- To generate structured document content.
- To provide Print / Save as PDF functionality.

4. TECHNOLOGIES USED

Frontend Technologies

- HTML
- CSS
- JavaScript

Development Tools

- Notepad
- Google Chrome

5. SYSTEM FEATURES

- User-friendly home page
- Document type selection
- Rental Agreement generation
- Affidavit generation
- Legal Notice generation
- Employment Agreement generation
- User details form
- Empty-field validation
- Generated document preview
- Print / Save as PDF

6. SYSTEM WORKFLOW

1. User opens the LegalEase application.
2. User clicks **Generate Document**.
3. User selects a document type.
4. User enters the required details.
5. The application validates the entered information.
6. LegalEase generates the selected document.
7. The generated document is displayed.
8. User can print or save the document as PDF.

7. DOCUMENT TYPES

The application currently supports:

1. Rental Agreement
2. Affidavit
3. Legal Notice
4. Employment Agreement

8. PROJECT DEVELOPMENT

The LegalEase application was developed using HTML, CSS, and JavaScript.

HTML was used to create the structure of the application. CSS was used to design the user interface and improve its appearance. JavaScript was used to implement document selection, form validation, and document generation functionality.

9. TESTING

The application was tested for:

- Rental Agreement generation
- Affidavit generation
- Legal Notice generation
- Employment Agreement generation
- Empty-field validation
- Print / Save as PDF functionality

The major functionalities were successfully tested.

10. RESULTS

The LegalEase application successfully provides a simple workflow for selecting a document type, entering user information, generating a structured document, and printing or saving the generated document as PDF.

11. FUTURE ENHANCEMENTS

The following features can be added in future versions:

- AI-based personalized document generation
- Additional legal document templates
- User login and registration
- Database integration
- Document history
- Advanced document customization
- Multi-language support

12. LEGAL DISCLAIMER

LegalEase generates documents for informational and drafting purposes only. The generated content should be reviewed by a qualified legal professional before being used for official or legal purposes.

13. CONCLUSION

LegalEase demonstrates how web technologies can be used to simplify the initial process of creating legal document drafts. The project successfully implements document selection, user input, document generation, validation, and Print / Save as PDF functionality through a simple web interface.
